Example: 15" 6-Piston Kit for GM ½ton SUV

- With a straight edge measure from the middle of the center bore out to 122 mm for the 15" 6-Piston Kit to locate the bottom of the caliper.
- Now measure down from the straight edge to the back of the wheel spoke for the Kit's "A" measurement. **The Kit needs 45mm or more for the "A" dimension** to clear the caliper.
- Repeat these (2) steps for the caliper clearance through to the top of the caliper.
